

Supplemental Figure 1: FOXP3⁺ cells lacking CCR8 are composed of effector T cells and less activated T_{regs}
 CD4⁺FOXP3⁺ tumor infiltrating T cells from lung patients ($n=5$) were divided into CCR8 positive and negative populations. (A) Intracellular IFN γ was stained 4 hours post-treatment with PMA/Ionomycin. (B) Frequencies of HLADR⁺ cells were measured without exogenous stimulation. ** $P < 0.01$. Mann-Whitney test (two-tailed) (A-B).
