

Fig S4. Interaction between NRF2 and CBP. Mouse Hepa1-6 (DT81 subline) was co-transfected with FLAG-NRF2 and HA-CBP plasmids and their expression was determined in the whole cell extract (WCE) with antibodies against FLAG or HA tags. The NRF2-CBP complex in the whole cell extract was immunoprecipitated with FLAG antibody and analyzed by immunoblot with HA antibody and vice versa. <, indicated the HA-CBP and FLAG-NRF2 band; *, indicated the IgG heavy chain.
