

Supplementary Figure S13- E2 and olaparib combine to increase R-loop formation. Cells were treated \pm olaparib for 2 d, then treated \pm olaparib \pm E2 x 24 h. Cells were fixed and stained for DNA:RNA hybrids (S9.6 antibody) and with DAPI. S9.6 fluorescence intensity was quantified in ≥ 100 nuclei/group. * $p < 0.05$, **** $p < 0.0001$.
