

Supplementary Figure S5. huHER3-8 blocks adaptive upregulation of ERBB3 following combined RAF and MEK inhibition. A&B) 1205Lu and A375 lysates were analyzed by Western blot for MCL-1 (BD Biosciences San Jose, CA ; #559027). **C)** WM793 and A375 cells were plated and treated overnight with vemurafenib (1 μ M) and GSK1120212/trametinib (100 nM). Cells were then treated with huHER3-8 and NRG1, as previously described, before lysis and analysis by Western blotting.
